At some stage your business will probably “evolve” meaning it will move, change or grow. When this happens your IT systems will need to do the same and we are here to ensure your systems also evolve in sync and we have the racking products and services that contain your very valuable system.

Rack build and installation service

At Attock Managed Services (AMS) we know that every business is unique, with unique needs. Thus, every data centre, floor or wall cabinet project we undertake is different. Instead of applying the same formula every time, our skilled technicians and engineers come up with a unique solution that matches your business needs and fits your budget and deadline. With this in mind “Attock Managed Solutions” have the knowledge, the ability and the stock to help you “Evolve”.

How it works

We will conduct a site survey, listen to your requirements and advise the best products for the job. In some cases we can produce bespoke racks to meet your requirements though there will be a lead time. We currently carry the largest range of racks in stock and one of our standard product will probably fit your requirements.

Our onsite rack assembly and installation service is ideal when your engineers have limited onsite time and access to the site is restricted. In most cases, your racks will arrive flat packed together with the additional

accessories that you have ordered such as shelves, PDU's, Cable management etc. This would either arrive

the day before our engineers are booked in to visit or our engineers will bring everything in our own

dedicated transport. This would depend on the rack and the accessories you have ordered. Our

experienced engineers will then build the racks to the agreed specification and

position them as required.

Qualified and certified

Our engineers are specialists in what they do and are all CSCS certified so you can be rest assured that your equipment is in very safe hands

Benefits of this service:

Risk Assessment should this be required.

Racks assembled by experienced professionals who are in possession of CSCS certification.

Save time on site for your engineers.

We will provide a complete check list of the job including QC inspection and provide a handover to the customer. This will also be followed up by email providing photographs of the installed racks in the location specified, the accessories that have been installed.

Why Choose our onsite rack assembly service?

“AMS” has been involved with many projects throughout the UK in the banking, education, retail and Health sectors. Our engineers have an in depth knowledge of the racks they are assembling thus ensuring your installation is carried out as YOU need it.

Reduce installation time for your engineers

Our team of specialist engineers, with their vast experience behind them will ensure your install is completed in the shortest time possible.
