

# UPS Services

An uninterruptible power supply (UPS) is a device that provides continuous clean power to electrical devices and systems, guaranteeing a backup when mains power sources fail, or when voltage drops to an unacceptable level. Moreover, backup UPS allow critical equipment to shut down safely while waiting for external power to resume. This provides customers with security and reliability regarding their critical backup power infrastructure, which helps to protect business continuity.

Depending on customer requirements, we offer a variety of UPS brands from 1 to 5kVA single phase. Attock only offer the leading brands within the UPS industry as illustrated below:

## Maintenance Plans

Like all technology, UPS systems have the potential for faults and errors which will negatively-impact their functionality. As such, Attock Networks consider regular maintenance to be vital in guaranteeing your power protection equipment remains reliable and consistent. To safeguard your business and your investment, we carry out regular visits to service your equipment, ensuring it's operating at peak performance.

There are numerous reasons why we would encourage you to utilise our maintenance plan. In addition to conducting regular site visits, our team also check equipment, change batteries as required, and provide maintenance reports after each visit, so you are better able to understand how your equipment is operating. This is just the tip of the benefits received by Attock Networks's clients; for an annual fee, we offer this and more – saving you the surprise of high fees in the face of unexpected equipment malfunction.

## Battery Disposal

Batteries are an essential part of UPS; the emergency power equipment wouldn't work without this element, meaning you would be left without emergency power protection. This is why we take maintenance seriously here at Attock. When you make use of our Maintenance Contracts, Managed Services, or One-off checks, we ensure maintenance is our top priority.

When your batteries are in need of replacement, our highly-skilled and professional engineers will swap them for brand-new batteries, making sure the old batteries will be recycled in an environmentally-friendly manner. Once we dispose of your batteries, you will be provided with all necessary documentation.

We are required to safely dispose of batteries due to their potentially environmentally-threatening properties. This is why we are able to offer a free disposal service where we collect and recycle your old batteries, minimising damage to the environment. Simply set up a plan with us to arrange a collection method, we will then safely recycle your batteries at no additional cost!
